DigitalSafe
Style and Security
All Locked Up

By Robert Lovelace

VALUABLES SAFE- Protecting your valuables is more important than ever and the most effective way to do just that is with a high quality safe. DigitalSafe manufactures luxury safes with as much attention to aesthetic appeal as they do security. Providing protection that is unmatched, DigitalSafe's new line of elegant wall safes features velvet-lined mahogany jewelry trays and LED lighting. The safe comes with a built-in theft detection system that locks down the safe if it is tampered with. DigitalSafe's luxury line is available in a variety of sizes ranging from "in-wall" safes to the DSI "floor cube product".

Turning to the early history of safes, "The first types of English safes were strong wooden boxes, bound with iron hoops. A specimen of the old wooden chest is preserved in the Cathedral of Chichester. It is 9 feet long, 2 feet wide, and 2 feet high, with a thickness of about 2 inches, and is thought to be about 1,000 years old.

Today, it's possible to purchase a safe that is small, elegant, easy to use and can provide the highest level of security for your valuables. These luxury safes are available in a wide range of styles that in no way resemble the microwave-sized steel blocks common to hotel rooms.

The world of high-end safe fabricators is extremely small and DigitalSafe has quickly established itself as a leader in this marketplace. DigitalSafe's custom-finished product portrays the traditionally sleek and muscular expectations while taking a craftsman's approach in creating these unique safes. President and Founder Streeter McClure launched the company more than 10 years ago and has watched demand for high tech secure home safes sky rocket in the past several years. " We make the Bentley of safes "says McClure " People who purchase a $50,000 piece of jewelry need a secure place to put it in their home ".

The business alliance that DigitalSafe has formed with national retailers was part of his vision in growing the company. Currently DSI has a national presence supplying jewelry stores like Hyde Park. " DigitalSafe creates an outstanding luxury product " said Steve Rosdal co-owner of Hyde Park. " If someone is interested in protecting their valuables this is a very small price to pay". DigitalSafe has also established an impeccable reputation in the fast growing custom closet business forming international partnerships with the Closet Factory and Closet Storage and Design. "DigitalSafe has provided hundreds of our customers with the sense of security we need in our lives when it comes to protecting such personal irreplaceable jewelry, documents and cash" praised Polly Lestikow, owner of Closet Factory Colorado.

Custom safes are not inexpensive, but for those who have expensive jewelry and valuables it is certainly a worthwhile investment. DigitalSafe's clients are individuals who are looking for a product to protect their personal items while having a sense of security in the product they choose for this function. DigitalSafe products combine security, creativity and craftsmanship to create a product for their discerning customers. At DigitalSafe, they are well aware of the personal nature as well as the value of such collections. "We do the utmost to preserve them by constructing safes which provide security while satisfying the highest demands in terms of ease of use, design, and operational features. A security safe should be far more than a mere cupboard, standing in the cellar or concealed behind a picture. A DigitalSafe can be placed anywhere desired – in your bedroom, cloakroom, dressing room, study or living room. Regardless of where you would like to keep your valuables, you will have the peace of mind of secure storage and easy access to the enjoyment of your valuables" said owner Streeter McClure.

Making the investment in expensive jewelry requires a product that has the features, reliability, and design necessary to please today's luxury buyer. The products that were in the marketplace prior to DigitalSafe is precisely what prompted McClure to start the company. "The difference is analogous to a Rolex Daytona which is valued over $10,000 and a $30 novelty watch," explains McClure. "At the end of the day, they both give you the time and date, but only one is a family heirloom that you will keep for a lifetime and pass on while the later is something that can be easily discarded."

One of DigitalSafe's newest product designs is the black, "Gold "model wall safe, which is outfitted with a mirrored interior specifically designed for storing jewelry and timepieces. " We are the only premier safe company designing black wall safes to compliment and keep up with the contemporary / modern darker woods that designers and buyers are using in their closet cabinetry "stated McClure.

Crafted in Colorado, DigitalSafe creates products that are first and foremost secure—the safes have a 100% success rate for its thousands of clients. They are manufactured to rigorous design specifications and standards. Each safe features an interior hinge system, forged steel bolting mechanisms and an electronic lock. This, coupled with DigitalSafe's team of highly trained installation experts, creates a turnkey experience.
